Task 5: Communication and Platform Stubs

Final Project - Task 5 | Digital Loan Pre-Approval & Onboarding (MVP), Online Bank | Prepared by: [Your Name], Business Analyst | 09 November 2026

Part 1: Executive Brief

Digital Loan Pre-Approval and Onboarding (MVP)

Problem. Loan applicants today face long forms, slow manual checks and days of waiting for an answer. Many abandon the process, operating costs stay high, and inconsistent manual steps create compliance risk.

Solution. A web and mobile onboarding flow that captures customer consent and KYC data, runs a soft credit pull that does not affect the customer's credit score, and returns an automated pre-approval decision within minutes. Complex or borderline cases are routed to trained agents, and every step is logged for audit.

Business goals and measurable outcomes

- Decision in under 3 minutes for 95% of automated applications (today: days)
- Application completion rate of at least 60%
- At least 85% of applications decided automatically; manual review below 15% with a 4-hour SLA
- 30% lower cost per application
- 100% of consents and decisions audit-logged; zero critical compliance findings

MVP scope. In: web and mobile application, consent capture, KYC/identity verification, soft credit pull, rules-based decision engine, manual review queue, notifications, audit logging. Out: multilingual UI, document upload, cross-sell offers, joint applications, hard pull and automated funding.

Key risks. Vendor (KYC/bureau) outages, mitigated with retries and manual fallback; manual review volume, mitigated by tuning thresholds in UAT; regulatory gaps, mitigated by Compliance sign-off at each gate.

Ask. Approve the MVP scope and thresholds, and confirm Risk/Compliance owners for UAT sign-off.

Part 2: Stakeholder Map and Engagement Plan

> **AI prompt used:** *Create a stakeholder map and engagement plan for a digital loan onboarding project. Categorize Product, Compliance, Operations, IT, Risk, Lending, InfoSec, Legal, Customer Support and Marketing by influence and interest, and include roles, responsibilities (RACI), communication frequency and preferred channels.*

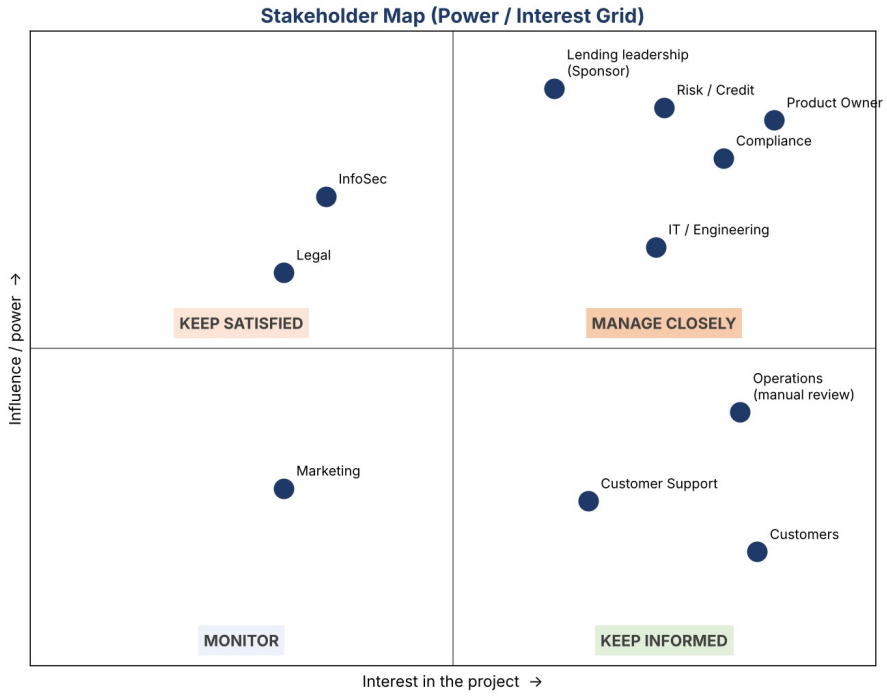

Figure 1. Stakeholder map (power / interest grid).

Stakeholder	Influence	Interest	Strategy	Role in project
Product (Product Owner)	High	High	Manage closely	Owns scope and priorities; final UAT sign-off
Lending leadership (Sponsor)	High	High	Manage closely	Funding, strategic approval
Risk / Credit	High	High	Manage closely	Credit thresholds and decision rules
Compliance	High	High	Manage closely	Consent, KYC, notices, audit
IT / Engineering	High	High	Manage closely	Build, integrate, deploy
Operations (manual review)	Medium	High	Keep informed	Review queue, SLA, staffing
InfoSec	High	Medium	Keep satisfied	Security controls, vendor risk
Legal	High	Low-Medium	Keep satisfied	Disclosures and contracts
Customer Support	Low	High	Keep informed	Handles customer questions
Marketing	Low	Low	Monitor	Loan offer campaigns (post-MVP)

RACI matrix

Activity	Product	Risk	Compliance	IT	Ops	BA	Support
Requirements & BRD	A	C	C	C	I	R	I
Credit decision rules	C	A/R	C	C	I	R	I
Consent & disclosures	C	C	A/R	I	I	R	I

Activity	Product	Risk	Compliance	IT	Ops	BA	Support
Build & integration	I	I	C	A/R	I	C	I
Manual review workflow	C	C	C	R	A	R	C
UAT & sign-off	A	R	R	R	R	R	I
Go-live decision	A	C	C	R	C	C	I

R = Responsible, A = Accountable, C = Consulted, I = Informed

Communication plan

Audience	Frequency	Channel / format	Owner
Sponsor / Lending leadership	Bi-weekly	Steering meeting + 1-page status	Product Owner
Product, Risk, Compliance	Weekly	Requirements/decision workshop; Confluence decision log	Business Analyst
IT / Engineering	Daily	Stand-up, Jira board	Scrum Master / Tech Lead
Operations	Weekly (daily in UAT)	Demo + review-queue walkthrough	Business Analyst
InfoSec, Legal	At each gate	Review meeting, email sign-off	Project Manager
Customer Support	Before launch + launch week	Training session, FAQ in Confluence	Product Owner

Part 3: Multilingual Executive Brief (Spanish)

> **AI prompt used:** *Translate the following executive summary into Spanish using a professional business tone. Retain technical clarity and correct terminology (e.g., KYC, soft credit pull, audit log).*

Preaprobación e incorporación digital de préstamos (MVP)

Problema. Hoy, los solicitantes de préstamos enfrentan formularios extensos, verificaciones manuales lentas y días de espera para obtener una respuesta. Muchos abandonan el proceso, los costos operativos siguen siendo altos y los pasos manuales inconsistentes generan riesgos de cumplimiento.

Solución. Un flujo de incorporación web y móvil que registra el consentimiento del cliente y los datos KYC, realiza una consulta de crédito suave (soft pull) que no afecta la calificación crediticia del cliente y emite una decisión de preaprobación automatizada en minutos. Los casos complejos o limítrofes se derivan a agentes capacitados, y cada paso queda registrado para auditoría.

Objetivos de negocio y resultados medibles

- Decisión en menos de 3 minutos para el 95 % de las solicitudes automatizadas (hoy: días)
- Tasa de finalización de solicitudes de al menos el 60 %
- Al menos el 85 % de las solicitudes decididas automáticamente; revisión manual inferior al 15 % con un SLA de 4 horas
- Reducción del 30 % en el costo por solicitud
- El 100 % de los consentimientos y decisiones registrados en el registro de auditoría; cero hallazgos críticos de cumplimiento

Alcance del MVP. Incluye: solicitud web y móvil, registro del consentimiento, verificación de identidad (KYC), consulta de crédito suave, motor de decisiones basado en reglas, cola de revisión manual, notificaciones y registro de auditoría. Excluye: interfaz multilingüe, carga de documentos, ofertas de venta cruzada, solicitudes conjuntas, consulta de crédito completa (hard pull) y desembolso automatizado.

Riesgos clave. Interrupciones de proveedores (KYC/buró de crédito), mitigadas con reintentos y revisión manual de respaldo; volumen de revisión manual, mitigado ajustando los umbrales durante las pruebas UAT; brechas regulatorias, mitigadas con la aprobación de Cumplimiento en cada fase.

Solicitud. Aprobar el alcance y los umbrales del MVP, y confirmar a los responsables de Riesgos y Cumplimiento para la aprobación de UAT.

Reviewed for tone and terminology: kept 'KYC', 'SLA', 'UAT' and 'MVP' as industry terms; 'soft pull' explained in parentheses.

Part 4: Platform Implementation Stubs

> **AI prompt used:** *Create one Jira Epic and three Jira user stories for a digital loan onboarding system (KYC, credit pull, decision engine). Follow standard Jira formatting with summary, description, acceptance criteria, story points and links to business rules and test cases.*

Jira Epic and user stories

Type	Key	Summary	Description / acceptance criteria
Epic	LOAN-100	Digital Loan Pre-Approval & Onboarding (MVP)	Deliver an end-to-end web and mobile flow: consent, KYC, soft credit pull, automated decision, manual review routing, notifications and audit logging. Goal: decision < 3 min for 95% of auto-decided applications. Labels: onboarding, mvp | Priority: Highest
Story	LOAN-101	KYC identity verification	As a compliance officer, I want every applicant's identity verified before any decision, so that we meet KYC/CIP rules. AC1: Given a submitted application, When KYC returns a full match and no watchlist hit, Then status = "Verified". AC2: Given a partial match, When processed, Then route to manual review. AC3: Given no match or a watchlist hit, Then status = "KYC failed" and no credit pull occurs. Story points: 8 | Links: BR-03, TC-03, TC-04
Story	LOAN-102	Soft credit pull with retry	As an applicant, I want a soft credit check that doesn't affect my score, so that I can see my options risk-free. AC1: Given verified identity and soft-pull consent, When the bureau API is called, Then score and DTI are stored. AC2: Given no consent, Then the pull is blocked. AC3: Given a timeout, Then retry 3x with backoff; if still failing, set "Pending - service delay". Story points: 8 | Links: BR-02, BR-06, TC-07, TC-08
Story	LOAN-103	Automated decision engine	As an applicant, I want an instant pre-approval decision, so that I know where I stand within minutes. AC1: Given score >= 680 and DTI <= 40%, Then decision = Pre-approved within 3 minutes. AC2: Given score 600-679 or DTI 40-50%, Then route to manual review. AC3: Given score < 600 or DTI > 50%, Then decline with reason codes and send an adverse-action notice. Story points: 13 | Links: BR-05, BR-09, TC-01, TC-05, TC-06

Confluence page outline: "Digital Loan Onboarding MVP"

- **1. Project overview:** Purpose, goals and KPIs, scope (in/out), sponsor and team, timeline
- **2. Architecture diagrams:** To-be BPMN, component and data flow diagram, entity model (attached from Task 2/3)
- **3. Requirements:** Links to Jira Epic LOAN-100, user stories, business rules catalog (BR-01 to BR-10), NFRs
- **4. Testing:** UAT plan, test cases TC-01 to TC-09, defect dashboard (Jira filter)
- **5. Risks & assumptions:** Risk register, open assumptions (retention period, thresholds) and owners
- **6. Decision log:** Date, decision, rationale, owner (e.g., '3-minute target applies to auto-decisions only')
- **7. Release & operations:** Deployment checklist, rollback plan, runbook, support FAQ
- **8. Stakeholders & communication:** Stakeholder map, RACI, meeting cadence

Diagram exports / attachments

Attachment	Source	Format	Location
To-be BPMN	Task 2, Figure 1	PNG + Graphviz source (.dot)	Confluence > Architecture; Miro board 'Loan Onboarding'
Component and data flow diagram	Task 2, Figure 2	PNG + .dot	Confluence > Architecture
Customer journey map	Task 2, Part 2	Table / Miro board	Confluence > Overview; Miro
Entity model	Task 3, Figure 1	PNG + .dot	Confluence > Requirements (data)
Dashboard mock-up	Task 3, Figure 2	PNG; Power BI .pbix (to build)	Confluence > Overview

Diagrams are generated as code, so they can be version-controlled in Git and re-rendered after changes; Confluence pages embed the latest export.
